

### CT-15-150

Highly compact, high-speed, electrically driven radial turbo compressor for the circulation and compression of various gases and refrigerants.

- Lowest ratio of volume and weight versus pressure and mass flow due to highest speeds
- Thermodynamic and electromagnetic optimization for highest total efficiency
- High-speed ball bearings with permanent lubrication
- Compatible to converter CC-75-500
- Integrated temperature measurement for overload protection

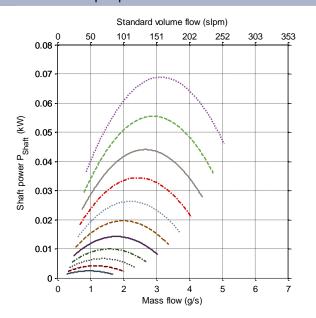

| Specifications turbo compressor                    |             |  |
|----------------------------------------------------|-------------|--|
| Maximum pressure ratio                             | 1.3         |  |
| Maximum mass flow                                  | 5 g/s       |  |
| Maximum isentropic overall efficiency <sup>1</sup> | 63%         |  |
| Rated power                                        | 70 W        |  |
| Rated speed                                        | 300,000 rpm |  |
| Weight                                             | 110 g       |  |

### Drawing (in mm)

The specifications and compressor maps in this document for

- an overpressure operation refers to air (ISO 8778) at the inlet of the compressor with: temperature:  $T=20^{\circ}C$ , absolute pressure:  $p_{in}=1\ bar$ .
- a vacuum operation refers to air (ISO 8778) at the inlet of the compressor with: temperature:  $T=20^{\circ}C$ , and a compressor absolute outlet pressure:  $p_{in}=1\ bar$ .

Depending on custom specific operation conditions such as e.g. gas inlet pressure and temperature, humidity, cooling conditions, the operation in environmental conditions with vibrations and/or depending on the combination of the compressor and the corresponding Celeroton converter, the compressor maps shown in this document may be different or may have additional limitations.

For technical details and further information, please refer to the user manual or contact Celeroton directly.
